Mukand Limited shall continue to focus on increasing efficiency, improving quality, and increasing its output

Mr Shashibhushan Upadhyay, President, Mukand Ltd.

Mr Shashibhushan Upadhyay, President, Mukand Ltd. says, "The company has invested in cutting-edge technology and modernized its production processes to ensure that its products are of the highest quality and are produced with minimal waste."

In the last year, we developed several new grades in our steel business for various applications like prestressed wire, fastener Industry, seamless tube application, oil and gas industry, automotive crankshaft, railways and others.

All these new grades are specifically developed for demanding applications, in consultation with its customers. The company's team of experts worked closely with its customers to understand their needs and requirements, and the company is proud to have developed a material that offers a unique combination of strength and corrosion resistance and can withstand extreme pressure and extreme temperature conditions. Mukand has also implemented the usage of silicon metal during tapping in EOF.

This innovation has resulted in minimizing the levels of aluminum and titanium in the final steel product, particularly for spring application grades. This has led to a significant improvement in the quality of our company's steel products, making them more suitable for various industrial applications.
